

About FEHRMANN Materials

[FEHRMANN Materials](#) is the materials division of the [FEHRMANN Tech Group](#), a fifth-generation, internationally operating, technology-driven industrial group headquartered in Hamburg, Germany. The company develops high-performance industrial materials — particularly aluminum alloys — and represents the intersection of industrial expertise, technological innovation, and data- and AI-driven approaches to materials development.

Materials are a critical driver of progress across industries: they determine how efficiently machines operate, how lightweight vehicles can be designed, and how durable products are. Without new materials, new technologies cannot emerge.

FEHRMANN Materials develops these essential foundations and thereby makes a significant contribution to the technological competitiveness of industrial companies in Germany and beyond. This deep materials expertise also forms the basis for the data- and AI-driven enterprise software platform developed by [FEHRMANN MaterialsX](#) within the Fehrmann Tech Group.
